

## **Instrumentation Hardware**

Close-Coupled Installation Hardware

### Introduction

#### Introduction

The AS-Schneider Group with its headquarters in Germany is one of the World's Leading Manufacturers of Instrumentation Valves, Manifolds, Flush Rings and combined customized solutions named as Close-Coupled Installation Hardware. AS-Schneider also offers a large variety of Ball Valves and the relevant Accessories required for instrumentation installations globally.

This brochure is an extract only, if you need further information, you can find them on our website

Instrumentation Ball Valves --> https://as-schneider-inbound.com/instrumentation-ball-valves/ Close-Coupled Flush Rings --> https://as-schneider-inbound.com/flushrings/ Close-Coupled Installation Details --> https://as-schneider-inbound.com/close-coupled-installation-details/

or get in direct contact with your responsible sales team.

Note: Not every configuration which can be created in the ordering information is feasible / available. Continuous product development may from time to time necessitate changes in the details contained in this catalogue. AS-Schneider reserves the right to make such changes at their discretion and without prior notice.

All dimensions shown in this catalogue are approximate and subject to change.

#### **K Series Ball Valves**

AS-Schneider's K Series Ball Valves are very robust, forged ball valves which are designed especially for severe service for the chemical and petrochemical process industry. They are especially used for Close-Coupled hook-ups. End connector and valve body are full penetration welded for environmental protection.

Selection can be made from a comprehensive range of bodies with a variety of connections and material options, optimizing installation and access opportunities. Many of the types shown in this catalogue are available from stock or within a short period of time.

#### **Features**

- Floating Ball Design Bi-Directional
- 2 Piece Design Fully Welded
- Forged Body in 1.0460 / A105 and 316
- Ball Bore Size 10 mm (0.39")
- · Ball Seats are encapsulated in Seat Carrier
- Material: PTFE or Carbon filled PTFE
- Stem Seal: PTFE or Graphite
- Max. allowable (Working) Pressure (PS): 250 bar (3,626 psi) | Class 1,500
- Anti-Blowout Stem Design
- Low Operation Torque
- Fire Safe tested acc. to ISO 10497 / API 607
- Wide Range of Connections available
- Pressure Test acc. to ISO 5208
- Leakage Rate A acc. to ISO 5208
- Seat Leakage Class VI acc. to ANSI/FCI 70-2
- Materials comply to NACE MR 0175 / MR0103 / ISO 15156
- Ergonomic Oval Handles Can be locked in opened and closed Position

#### **Optional Features**

- Fugitive Emission Bonnet TA-Luft conformitiy optional
- Anti-Static Design
- Vented Ball
- Spring Loaded Ball Seat
- Ball Seat: PEEK, PCTFE and PFA
- Stellited Ball
- · Padlock for Lockable Handle
- Extended Stem
- Cryogenic Applications tested acc. BS 6364
- Special Cleaning for Chlorine and Oxygen Service
- Optional Materials:
- ASTM A350-LF2, Alloy 400, Alloy C-276, Duplex, Etc.

For further Details, please contact the factory.

#### KM Series | Metal Seated Ball Valve

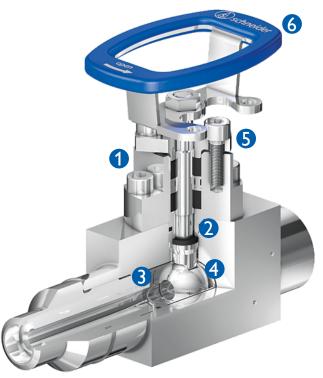

Extreme operating conditions with temperatures up to 450°C (842°F) and pressures up to 420 bar (6,092 psi) require special sealing technology in ball valves.

Standard Soft Seated Ball Valves simply aren't ready for this kind of requirements. Their plastic seals would fail. Metal Seated Ball Valves don't have this problem. However, most Metal Seated Ball Valves are not available for high pressures and also not available for smooth operation. AS-Schneider entered the Metal Seated Ball Valve arena with the KM Series.

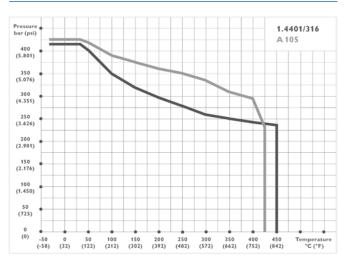

When developing the KM Series AS-Schneider uses the latest surface and material knowledge combined with comprehensive engineering know-how. The result is a ball valve with zero leakage even under extreme operating conditions with respect to working pressure and temperature – even though a smooth operation is provided.

#### **Features**

- 2 Piece Design Fully Welded
- Ball Bore Size 10 mm (0.39")
- Seat and Ball Surfaces coated with Hardalloy and Carbide compounds
- 'Dissolution' Ball Valve Design and an outstanding axial bearing washer at the stem – For smooth operation (even at high working pressures)
- Double Sealing System in fugitive emission bonnet consisting of premium-quality graphite sealing rings
- Pressure Rating: Class 2,500
- Max. allowable Temperature (TS): -29°C (-20°F) to 450°C (842°F)
- Anti-Blowout Stem Design
- Can be locked in opened and closed position
- Oval Handle can be dismounted during operation
- Even Non-wetted Parts are made of 316 Stainless Steel for operation in corrosive environments
- Seat Leakage: ANSI / FCI 70-2 Class V
- Body Material: 1.4401 / 316 or LF2 / A105N
- Materials comply to NACE MR 0175 / MR0103 / ISO 15156
- Ball Valve meets requirements of TA-Luft (leak rate < 4,6 x 10-6 mbar x l/s)</li>
- Fire Safe tested acc. to ISO 10497 and API 607
- Design Basis: ISO 17292, ASME B16.34, MESC SPE 77/170, MESC SPE 77/110

#### Pressure-Temperature Rating

- 1. Fugitive Emission Bonnet with Double Sealing System and Lantern Ring
- 2. Outstanding Axial Bearing washer integrated at the Stem
- 3. Smooth Operation due to 'Dissolution' Ball Valve Design
- 4. Seat and Ball Surfaces coated with Hardalloy and Carbide compounds
- 5. Adjustment Capability for Packing with Gland Follower
- 6. Oval Handle can be dismounted during operation

#### KM Series Ball Valve | Examples

### **Close-Coupled Flush Ring I Features**

### **Product Examples**

#### **Standard Features**

- Meets pressure class from 150 to 2500
- Up to 6"
- Fully welded
- 1 or 2 flush ports
- Concentric or eccentric cavity position
- Direct mounted per threads

Valves: Several Ball-, Gate or Globe valves

Fire safe: in acc. to API 607 and ISO 10497

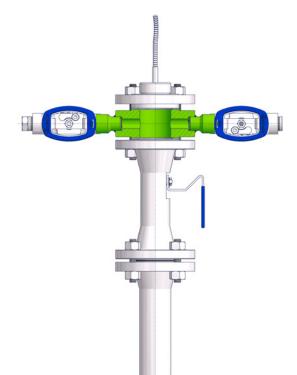

NACE:

0175 and ISO 15156 Factory tested by default acc. ASME B16.34 DIN EN 12266-1 P/T rating ANSI / ASME B16.34 PTFE or Graphite

#### **Optional Features**

- Painting
- Special Cleaning
- NDE testing
- PFA Lining
- 1 or 2 vent / flushing connection
- Alloys

If you don't find your options in this catalogue, please contact the factory.

### **Closed-Coupled Installation Details I Examples**

#### Examples

Close-Coupled Installation Details can be used in all industries where measuring is required. Regardless of if you have a pressure, flow or level measurement. Using a wide range of compact designs and self-contained systems, they promise accurate measurement while ensuring high environmental and human safety. With less installation and maintenance efforts, Close-Coupled Installation Details promise an extended life cycle of the measurement arrangement.

### Monoflanges

#### Monoflanges

AS-Schneider Monoflanges are designed to replace conventional mutiple-valve installations currently in use for interface with pressure measuring systems. By combining customer specified valves into a single manifold, the number of leak paths is considerably reduced and the mass of the system is lowered reducing the stresses from loading and vibration. The AS-Schneider Monoflange Series are available as Process Monoflanges and Intrument Monoflanges.

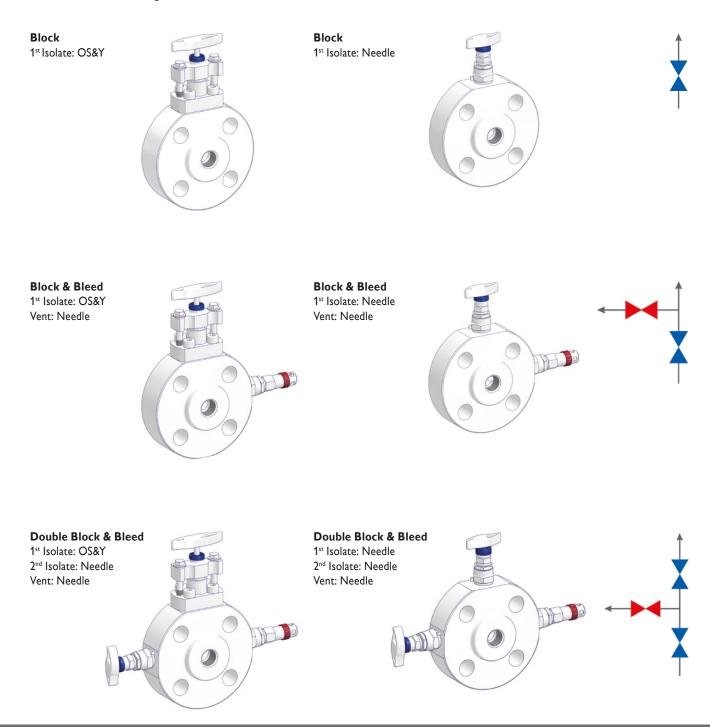

#### **Process Monoflanges**

Process Monoflanges are designed to replace the traditional primary isolation valve and are Close-Coupled to the process piping flange, for connecting process to instruments. The primary isolation valve needs to be of process design, therefore it's a valve with OS&Y

Bolted Bonnet. The secondary isolation valve and the bleed valve are provided with screwed bonnets. The combining of piping and instrument valves into a single unit has benefitted various markets.

#### Instrument Monoflanges

Instrument Monoflanges are Close-Coupled to a pre-installed primary isolation valve to provide a compact Instrument Double Block & Bleed Valve or are used when primary isolation valves with an OS&Y Bolted Bonnet are not required. The needle valves of the Instrument Monoflanges are provided with a screwed bonnet.

### **Monoflanges – Assembly Examples**

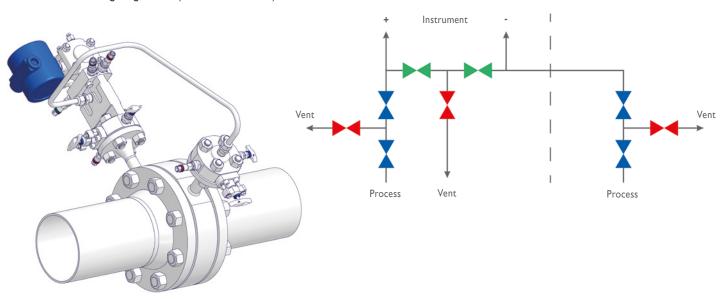

#### **Assembly Examples**

There are various possibilities in using the Monoflange concept not only for Pressure Applications. The following pictures are showing two examples for Differential Pressure Assemblies – Flow and Level.

#### Flow Assembly

Consisting of:

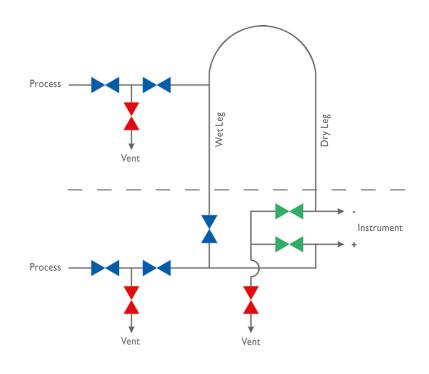

- 1 x Process Monoflange Type V, e.g. DB&B with an Integrated 3 Valve Manifold (High Pressure Side +)
- 1 x Process Monoflange, e.g. DB&B (Low Pressure Side -)

#### Level Assembly

- Consisting of (Wet / Dry Leg Installation):
- 1 x Process Monoflange Type V, e.g. DB&B with an Integrated 4 Valve Manifold (High Pressure Side +)
- 1 x Process Monoflange, e.g. DB&B (Low Pressure Side -)

Note: Flange x Thread Design – Position of Secondary Isolation Valve on opposite side of Primary Isolation Valve

<sup>\*1</sup> Available for Ø 10, Ø 14 and Ø 20.
<sup>\*2</sup> Available for Ø 14 and Ø 20.
<sup>\*3</sup> Available for Ø 10 only.
<sup>\*4</sup> Relevant for Flange Sizes ≥ 3" only. For Flange Sizes 1/2" to 2 1/2" Class 1,500 (Code E) to be used.

Wetted Parts according to above mentioned material list are supplied according to NACE MR0175/MR0103 and ISO 15156 (latest issue). Note: Not every configuration which can be created in the ordering information is feasible / available.
